

As an almost daily of GPS technology, for business and private use, it is imperative to protect our nation's investment in the GPS infrastructure as dependence on the system spans users in our military, national security, first responders, transportation, education, and perhaps the largest sector -private industry and private citizens (tax payers). Disabling, degrading or disrupting GPS signals would profoundly and adversely affect each of our everyday lives. LightSquared must be stopped.

Thank you for your time,

Ronald Daley
